VeriDemand Synthetic PDF Regres

Version 1.0 - 70 page-scoped test cases in one uploadable PDF

How to use

1. Upload this single PDF to VeriDemand and process it through canonicalisation and native t
2. Compare each T01-T70 result with the included manifest JSON and the visible page.
3. Rejected pages must publish no native words or characters.
4. Pages marked visual/image authority are intended for Phase 4 or later visual processing.
5. Some outcomes are intentionally policy-dependent; the manifest explains the safe expecta

Important limitation

Encryption, digital signatures, malformed xref/trailer damage, embedded attachments and document-open JavaScript are document-scoped. They are not included because adding them would affect or block the entire combined PDF rather than one page.

Entirely synthetic. No private, medical, legal or customer data is included.

Healthy machine-generated text with ordinary geometry.

Golden reference: The visible page should be compared with extracted native text and geometry.

Synthetic Account Summary

Reference:	VD-2026-0001
Service date:	2026-07-23
Balance:	$1,234.56
Status:	Open

This clean page is expected to use its native text layer. Coordinates, Unicode and token structure are ordinary and deterministic.

T60 - AcroForm fields and widget values

Expected: native_authority

Text field, checkbox and radio buttons are interactive annotations.

Claim number:

Verified:

Authority choice: Native Visual

Visible labels are native text; field values may be stored separately.

T61 - Link, highlight, note and free-text annotations

Expected: native_authority

Viewer must expose and render several annotation types.

Highlighted reference phrase: SYNTHETIC ANNOTATION TARGET

Open safe example link

A note icon and free-text annotation should appear on this page.

T62 - Appearance-only fake redaction

Expected: visual_authority

Underlying native text remains extractable beneath a black rectangle.

VISIBLE LABEL: ACCOUNT IDENTIFIER

The black rectangle is not true redaction; native extraction can still reveal text.

T63 - Watermark and stamp over content

Expected: native_authority

Large rotated watermark and visible stamp.

T66 - Optional Content Group (layer)

Expected: native_authority

A page-level optional layer is added during post-processing.

A green optional-content rectangle should appear inside the outlined box.

The layer is ON by default. A capable viewer may allow it to be hidden.

T67 - Repeated Form XObject content

Expected: native_authority

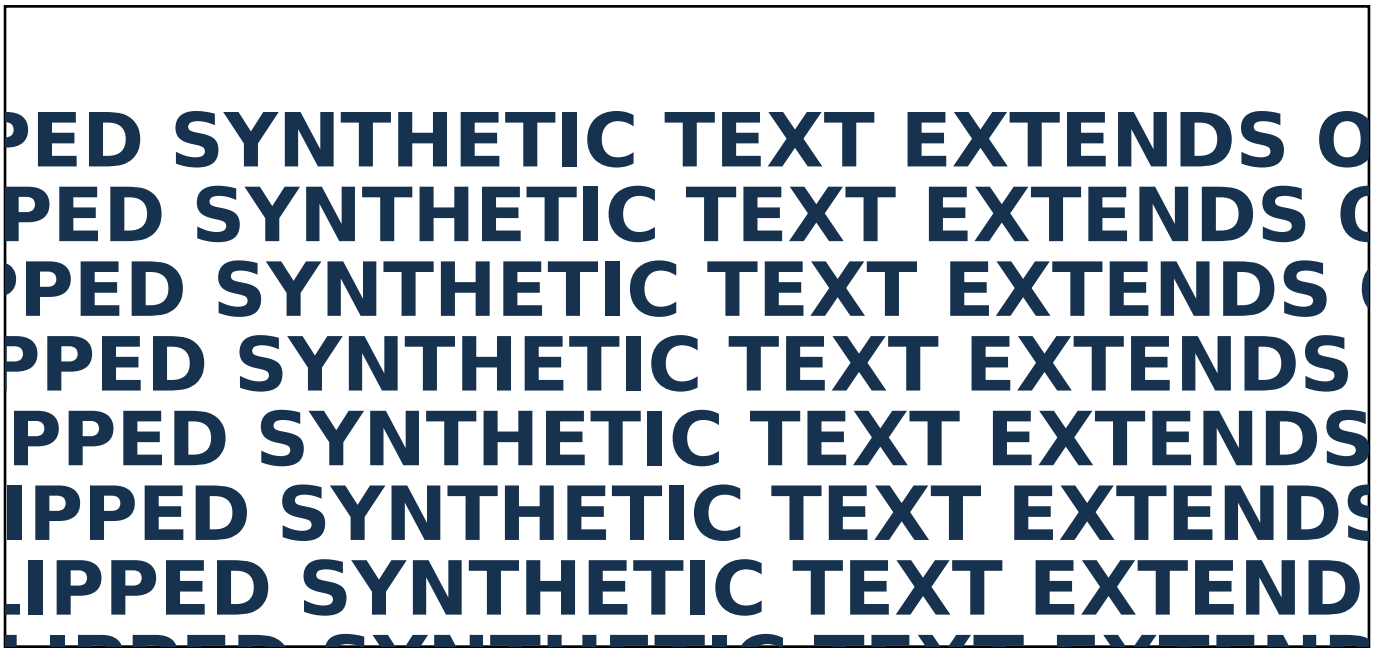
The same form XObject is reused many times.

FORM XOBJECT
Reusable synthetic card

T68 - Clipped text and graphics

Expected: native_authority

Content extends beyond a clipping path.



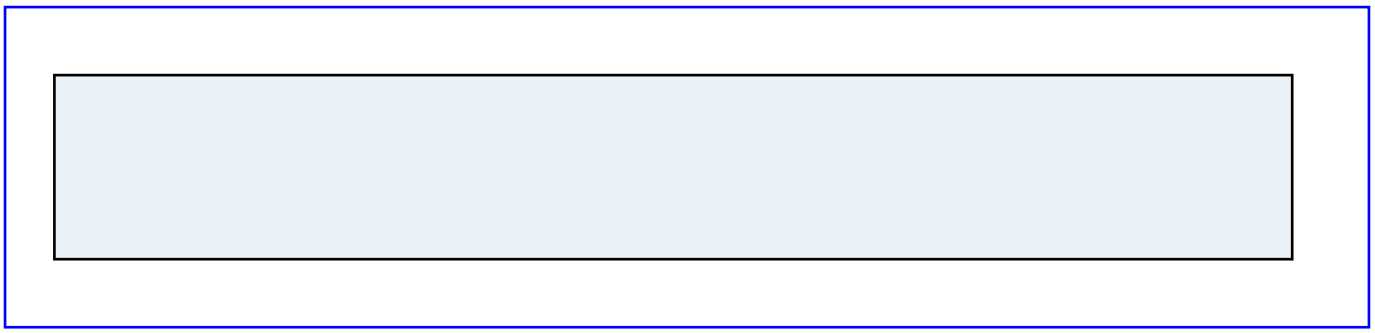
Only the portion inside the outlined rectangle should be visible.

T69 - Annotation-only visible text

Expected: native_authority

Visible text is added as a FreeText annotation rather than page content.

The box below should contain text supplied only by an annotation appearance.



T70 - Marked-content ActualText mismatch

Expected: visual_authority

An /ActualText replacement intentionally disagrees with the painted string.

The boxed line is added during post-processing with conflicting /ActualText.

VISIBLE VALUE 12345 - CORRECT ON PAGE
